

Dear Ms. Henney,

Please suspend Monsanto's license to sell rBGH. We continue to pour inadequately tested chemicals into the environment without a thought to how they are affecting ourselves and our children. Meanwhile the incidence of breast cancer and infertility increase yearly. We are only just beginning to discover how certain chemicals affect us even though those chemicals have been around for years. We must stop pouring new and untested contaminants into our environment and our food.

Sincerely

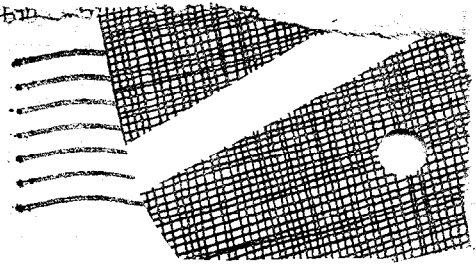

Marianne M. Rwinus
